

T-CAM Name Overlay

Description

The T-Cam Name Overlay is an add-on to display the name of the speaker onto the video output. The names for the video overlay come from the CoCon delegate database.

There are two options for creating the Name Overlay: on the PC or the *video switcher*. Activating Name Overlay on the PC monitor offers more configuration options such as font, color, and logo; this option requires an additional capture card. Activating Name Overlay on the switcher results in low latency video, however, the configuration of the overlay is fixed.

Features

This add-on allows you to add an overlay onto the video output:

- » Choose between PC monitor or video switcher overlay mode
- » 1 license for name overlay
- » Capture card: Blackmagic DeckLink Mini Recorder (included, only required when using the PC monitor overlay mode)

Important

- » The names for the video overlay come from the CoCon delegate database. Therefore CoCon Discussion is required.
- » When using the Name Overlay on a PC monitor, a second capture card is required; therefore a PC with 2 PCI slots is needed.
- » T-Cam Name Overlay is an add-on to the T-Cam package.

System Requirements

Recommended PC requirements:

- » Desktop PC with at least 2 PCI slots, if both preview and overlay are required.
- » Windows 7, 8 and 10 supported
- » Serial COM port (USB to Serial converter can be used as well).
